

Market Debunk

#MARKETDEBUNK

**51% Premium
+ 6%**

92x P/E

The Core

Illusion Exposed

By Math

✗ RETAIL ILLUSION

Retail belief: 'The stock is rallying, it's a winner, I need to buy now before it hits the moon.'

✓ INSTITUTIONAL TRUTH

Institutional truth: 'The stock is priced at 46.5x FY26 P/E, leaving zero margin of safety. We are offloading into retail liquidity.'

The Hidden **Cost of** Chasing Momentum

VERIFIED MARKET IMPACT

6% Rally

compounding loss / penalty

Chasing a 6% rally on a stock already trading at a 51% premium forces you to buy at the peak of institutional distribution. This creates a negative expectancy trade where the downside risk far outweighs the limited upside potential.

The Liquidity *Trap: How* You Get Stuck

1

2

3

Mathematical Drag: *Priced for* Perfection

At 46.5x FY26 P/E, the market has already baked in years of aggressive growth. Any minor earnings miss or sector correction will result in a violent P/E compression, effectively vaporizing the premium you paid at entry.

The Non-Negotiable *Institutional Rule*

Never chase a stock trading at $>40x$ forward P/E post-listing. The golden rule is to wait for the 'lock-in expiry' volatility window. This is when the true price discovery occurs, often revealing a much more attractive entry point for long-term capital.

Pre-Trade Risk

Checklist

- ✗ Is the P/E ratio below 30x?
- ✗ Has the lock-in expiry period passed?
- ✗ Is the stock trading below the listing day high?
