

Market Debunk

#MARKETDEBUNK

Why your Gold portfolio *leaking value*

■

The Core

Illusion Exposed

By Math

✗ RETAIL ILLUSION

Rate hikes mean the gold bull run is dead; time to panic-sell or short.

✓ INSTITUTIONAL TRUTH

Institutions view rate-hike volatility as a liquidity event to trigger retail stop-losses and accumulate at lower levels.

The Cost **of Market** Friction

VERIFIED MARKET IMPACT

₹3,351

loss per 10 grams

This drop isn't just price movement; it is the mathematical result of leveraged stop-losses being triggered by rising US Treasury yields, forcing retail out before the institutional accumulation phase begins.

The Liquidity

Extraction Mechanism

1

2

3

How Capital *is Quietly* Extracted

Retail traders often hold unhedged, high-leverage positions. When macro volatility hits, the resulting margin calls force liquidation. Institutions wait for this 'forced selling' to acquire underlying gold at a discount, effectively transferring wealth from the reactive retail trader to the proactive institutional desk.

The Non-Negotiable *Institutional Rule*

Never hold unhedged, high-leverage MCX futures contracts into central bank volatility windows. You must decouple your long-term physical gold exposure from your short-term derivative positions to ensure that macro-driven noise does not force you out of a fundamentally sound position.

Pre-Trade Risk

Checklist

✗ Holding high-leverage futures during Fed announcements.

✓ Decoupling physical gold from derivative speculation.

✓ Hedging against USD/INR currency depreciation.
