

# How a 65-year-old turned **\$25,000 liquidity**

■

# The Core

## *Illusion Exposed*

# By Math

Retail investors dismiss this as a dating app anomaly. Institutions categorize this as **Synthetic Identity Fraud (SIF)**. The **65-year-old** perpetrator utilized AI to bypass KYC verification, proving that automated social engineering is now the primary vector for unauthorized retail brokerage account hijacking and liquidation.

# The Mechanism *of Automated* Hijacking

Bad actors now use deepfake voice and video to bypass biometric identity checks. Once inside, they execute unauthorized high-frequency trades to drain account liquidity. This is not a human-to-human crime; it is an automated, scalable attack on the weak security architecture of standard retail trading platforms.

# The Hidden

## *Liquidity Trap*

When an account is compromised, the attacker does not just steal cash; they use the account to execute wash trades or pump-and-dump schemes. Retail investors become the involuntary exit liquidity for institutional-grade bad actors, leaving the victim with zeroed-out positions and a destroyed credit profile.

# The Cost *of Security* Negligence

A single account breach results in a 100% loss of principal. When factoring in the recovery time, legal fees, and the opportunity cost of lost capital, the erosion of your net worth is absolute. Relying on outdated security is a mathematical guarantee of eventual total portfolio failure.

# The Non-Negotiable

## *Institutional Rule*

Abandon SMS-based OTPs immediately. They are compromised by AI-driven SIM-swapping and interception. You must implement hardware-based 2FA, such as a YubiKey, for all brokerage and banking portals. If your broker does not support physical security keys, your capital is currently at high, unnecessary risk.

# The Pre-Trade

## *Security Audit*

Before allocating capital, perform this 3-point audit:

1. Enable hardware-based 2FA. 2. Disable all SMS-based recovery options. 3. Set up real-time trade execution alerts via email. If you cannot verify the security of your account, you are not investing; you are gambling with an exposed balance.
