

**Surviving 1992
created a**

₹711Cr Illusion

Deconstructing the **Scam Myth**

✗ RETAIL ILLUSION

Retail traders assume surviving market crashes with unhedged risk will yield multi-hundred crore personal wealth.

✓ INSTITUTIONAL TRUTH

Institutional wealth accumulation stems from monetizing retail turnover fees, not holding pure directional market risk.

The Math *of Brokerage* vs Speculation

VERIFIED MARKET IMPACT

99% Loss

unhedged retail survival rate

While Class 12 dropouts monetized market infrastructure by collecting transaction fees on retail order flow, 99% of unhedged directional retail accounts from 1992 were permanently wiped out by compounding drawdowns.

How Market *Picks &* Shovels Work

1

2

3

The Hidden

Mathematical Friction

Retail investors fall victim to survivorship bias by confusing enterprise value created via brokerage fee-extraction with speculative trading acumen. Every trade incurs churn costs, exchange fees, and taxes that continuously drain capital into platform balance sheets.

The Institutional *Execution Rule*

Never confuse platform monetization with trading edge. Institutional players separate the high-probability business of selling market access from low-probability directional market speculation. Hedge exposure and strictly manage trade costs before entering any order flow.

Pre-Trade Risk

Audit

Holding unhedged speculative positions through black swan market crashes.

Confusing market infrastructure enterprise value with retail trading success.

Auditing total transaction drag and treating trading as strict risk-defined math.
