The Hidden Risk Behind *extend losses*

Why Retail

Investors Misread

Brokerage Targets During A Collapse

✗ RETAIL ILLUSION

A 41% drop with an 'Outperform' rating and high target means the stock is heavily oversold and a safe dip-buy.

✓ INSTITUTIONAL TRUTH

Institutions are repricing the entire aggregator model due to incoming regulatory shifts that render historical earnings multiples obsolete.

The Brutal **Math Of** Catching Falling Knives

VERIFIED MARKET IMPACT

41% Loss

erased over four consecutive sessions

Retail traders piling into a crashing asset based on lagging broker targets face extreme mathematical friction. A falling stock with broken fundamentals rarely rebounds without a base, resulting in rapid capital depletion.

How Smart **Money Exits** While Retail Buys

1

2

3

The Structural *Drag Of* Obsolete Valuations

When regulatory changes threaten fee structures, historical cash flow projections become useless. Relying on an 'Outperform' rating without auditing the underlying policy risk creates a silent capital drain as the fundamental business model contracts permanently.

The Non-Negotiable *Execution Rule*

Never equate a brokerage target price with a fundamental floor. If regulatory headwinds threaten the core business model, the price target is a lagging indicator—not a support level. Always prioritize structural shifts over sell-side analyst optimism.

Pre-Trade Risk

Audit Checklist

Buying purely because a stock dropped 40%+ in a few sessions.

Treating broker 'Outperform' ratings as guaranteed price floors.

Evaluating regulatory policy impacts on future unit economics first.

Don't forget to **save & share** this for later
