Akasa grew revenue 35%, widened 37%

.

Fleet Growth *Lifted Ticket* Sales

VERIFIED MARKET METRIC

35%

FY26 Revenue Growth

Akasa Air expanded its domestic and international flight network and added more aircraft to its operating fleet.

Why Net *Losses Outpaced* Revenue

❓ COMMON QUESTION

A 35% jump in revenue means an airline is nearing profitability.

✅ SOURCE-BACKED ANSWER

Akasa Air's net loss widened by 37% over the exact same period, outpacing its sales gains.

Financing And *Forex Drained* Cash

1. Aircraft Costs: Adding new planes to the fleet increased fixed procurement and lease expenses.
2. Financing Expenses: Borrowing capital to support expansion drove up regular debt service costs.
3. Forex Losses: Global aviation liabilities exposed earnings to foreign-exchange currency swings.

Revenue Versus *Real Net* Losses

Top-line revenue is simply the total money collected from ticket buyers. Net loss is what happens after paying aircraft leases, financing interest, and currency hits. High sales do not help if operational costs rise faster.

Aviation's Brutal Capital Squeeze

Airlines require massive advance capital to fly. More planes mean higher financing overhead. If ticket pricing cannot offset rising dollar costs and interest payments, every additional route can temporarily increase total losses.

Evaluating Growth *Beyond Headline* Revenue

- ✓ Check if net losses are shrinking alongside revenue gains
- ✓ Monitor whether financing costs and debt burdens are stabilizing
- ✗ Relying on fleet expansion or passenger volume alone

Look Beyond *Rapid Sales* Growth
