Exposing Retail Traps & Institutional Math

#MARKETTRUTH

The Illusion of Safe 7% FDs

The Myth: Retail investors assume a 7% FD guarantees risk-free wealth accumulation and absolute safety.

The Reality: In the 30% tax slab with 6% inflation, your real return is -1.04% per year.

Core Rule: Nominal yield creates comfort. Real yield creates wealth.

3 Silent Leaks in FD Returns

- 1. Tax Slice:** A 30% tax slab reduces a 7% nominal yield down to a post-tax return of just 4.9%.
- 2. Inflation Drag:** Subtracting a 6% inflation rate leaves your capital with an actual real yield of -1.04%.
- 3. Compound Decay:** Negative real returns silently erode over 30% of your capital's real purchasing power over time.

The 3-Step Real Yield Audit

1

TAX DEDUCTION

Post-tax = $7\% \times (1 - 0.30)$

2

INFLATION

Real = $(1.049 / 1.06) - 1$

3

REAL RESULT

Net yield = -1.04%

Nominal yields mask systemic loss.

Always calculate net purchasing power after tax and inflation.

Takeaway: Audit all ongoing expense ratios, platform charges, and spread costs before investing.

3 Rules Before Locking Capital

- 1. Calculate Post-Tax Yield First:** Never evaluate an instrument on gross nominal returns alone.
- 2. Benchmark Against CPI:** Ensure your net yield beats headline inflation consistently.
- 3. Audit Hidden Friction:** Audit all ongoing expense ratios, platform charges, and spread costs before investing.
