

Your international
trip costs
40% more

The Budget **Illusion**

comparison_data Reality check: You see the price of the ticket and the hotel room. You assume that is the cost. The reality is that visa fees, card markups, and local tips are waiting to add 25-40% to your total bill.

The 25–40%

Gap

stat_data According to Economic Times Wealth, these overlooked charges—like foreign exchange markups and optional tours—can increase your total trip expenditure by 25–40%.

What is **a 'Card** Markup'?

card_text When you swipe your card abroad, banks often charge a 'foreign exchange markup fee.' This is a hidden percentage added to every single transaction you make in a foreign currency.

The Hidden **Cost Checklist**

checklist_data Check these off before you finalize your budget: Visa fees (Pass/Fail), Card markup fees (Pass/Fail), Local transport costs (Pass/Fail), Mandatory tips (Pass/Fail), Optional tours (Pass/Fail).

How to

Plan Better

flowchart_data Step 1: List major bookings. Step 2: Add 40% as a 'hidden cost' buffer. Step 3: Research local transport and dining costs. Step 4: Check your bank's foreign transaction fee.

Why Uncertainty **Matters**

card_text Not every trip will hit the 40% mark, but failing to account for these variables creates the risk of a major financial surprise. It is better to over-budget than to run out of money mid-trip.

Takeaway: Plan **for the** 'Extra
