10.3 lakh salaries frozen: *guaranteed income* isn't guaranteed

The Illusion *Of Guaranteed* Pay

card_text Most employees assume that if a government paycheck is delayed, banks will automatically pause loan deductions (EMIs). This is a myth. Banks operate on automated systems that do not track individual employer payroll issues.

The Cost *Of Bounced* Debts

stat_data When your account balance is too low for an automated payment (NACH mandate), the bank charges a 'bounce fee'. This is a penalty for a failed transaction, regardless of why the money didn't arrive.

Sudden Freezes *Cripple Cash* Flow

comparison_data Expectation: The bank sees the government delay and waits for me. Reality: The bank's computer sees an empty account and triggers a penalty fee + potential negative impact on your credit score.

How State *Payroll Halts* Work

flowchart_data 1. You sign a NACH mandate (permission for auto-debit). 2. The bank sends a request on the fixed date. 3. If funds are missing, the system marks it as 'Insufficient Funds'. 4. Penalty is applied automatically.

Building Separate *Emergency Cash*

checklist_data 1. Check your upcoming EMI dates (Pass/Fail). 2. Review your current account balance (Pass/Fail). 3. Contact your bank to pause NACH mandates if a delay is expected (Pass/Fail).

Managing Long *Payment Delays*

card_text While the government investigates the salary scam, there is no official timeline for when the 10.3 lakh employees will receive their funds. Relying on a 'guaranteed' date for your own bill payments is currently risky.
